(31) The Citizens' (Owners') Rights Framework

Operational Note: Users must strictly review the Disclaimer (Document 53) [REF:D53] regarding operational risk assessments and liability limitations prior to deployment. TCORF standardizes requests and audits; enforceability depends on local reality. The User assumes full responsibility for assessing the safety of the operational environment.

Rights Classification Labels

- **[AUDIT EFFECT]**: The Right is tested by what the Organization publishes and by how it handles a request: intake, registration, routing, preservation. The Owner records the result. The Right does not stop the action it describes.
- **[STOP CONDITION]** Everything under [AUDIT EFFECT], and in addition the Right's failure criteria name the act itself, not only the handling of a request.

Both are audit benchmarks, not legal entitlements.

Wherever this framework says "must", "shall", "required", "obligated" or "not acceptable", it states the benchmark the Organization's conduct is audited against. It creates no obligation, and a miss is recorded as a Finding, not enforced.

In an Active Audit, any real-world request must be grounded in applicable law, policy, contract, or stakeholder obligations — not in TCORF text alone.

For avoidance of doubt: [STOP CONDITION] rights always include the full audit, intake, documentation, and preservation guarantees of [AUDIT EFFECT] rights.

A request names the non-compliance with a Right. If it is not handled, a new request may name Request Not Handled (D40 §18). D32 describes how a gap is measured.

On Numeric Thresholds

Where this framework specifies numeric thresholds (e.g., days, limits, quantities), these values are audit thresholds, not claims of optimal policy design. Numeric values are required to ensure measurability and comparability. Any threshold necessarily involves normative choice; the absence of a number would make compliance non-auditable. Each value is a bound set in the direction of stronger protection for the Owner. A minimum (notice periods, retention, history, coverage, floors) may be exceeded. A maximum (deadlines, response and publication lags, decree limits, tenure limits) may be undercut. Stricter protection always remains compliant.

Why these 39

Each Right is built against a specific way an Owner can lose something. Most rest on a documented mechanism, mostly from the last 250 years, and mechanisms do not expire: a method that worked once stays available and tends to be reused when the conditions return. Some rest on a structural asymmetry rather than a single case — a company can file for insolvency and a person often cannot. A few are anticipatory; Right 30 says so in its own text.

Where a Right surprises you, read its Strategic Justification. That is where the failure it was written against is stated. Where no mechanism is named, the Right stands or falls on that argument, and you should read it as an argument.

Where a negative country-specific example is named, it is Germany 1933–1945. That is deliberate and it is the only one. The absence of an example is not the absence of a mechanism.

A harmful mechanism that worked once can return. TCORF works for the individual, not on the course of events: a citizen inside them, as in 1933–1945, could have used such a tool to recognize the signs earlier, and so have had a chance not to become part of them.

Full selection method: Document 10, Section 3 and section 4.

On Extensions

Each Right declares, in its own entry, whether it carries a technical extension in Document 32. Rights that resolve into a published metric or dataset do: their field lists, cadences, retention periods, formats and checks are too long to sit inside the catalogue. Rights tested by the act itself — what took place, and whether it did — do not, and say so.

No Right is silent on this. An extension is a decision about length, not a ranking. Several of the Rights without one are among the most consequential here.

All “Accountable Entity (Relationship)” entries reference the canonical Category IDs defined in Table “Accountable Entity (Relationship)”.

Accountable Entity (Relationship) table

Category ID	Category	Definition / Scope / ID references	International Equivalent examples
CAT-NAT-GOV	National Government	the central executive, legislative and sovereign bodies of a country, and the national agencies and authorities acting under them	State, Federation, Country, Tax Authority.
CAT-REG-AUTH	Regional Authority	Intermediate governance levels responsible for a territory within a country	Province, Canton, Land, County.
CAT-LOCAL-GOV	Local Government	Governance at the most immediate level of residence	Town, City, Village, Municipality.
CAT-SECURITY	Law Enforcement & Security	Public safety and security institutions (public or private)	Police, Military, Intelligence, Private Security.
CAT-PUBLIC-SVC	Public Service Providers	Organizations managing essential infrastructure and services	Waterworks, Energy Providers, Schools.
CAT-MONOPOLY	Monopolies	Entities (state or private) with dominant market share in essential sectors, for a single Owner perspective even an HOA can be considered as monopoly	Utility Monopolies, Dominant Banks, HOA.
CAT-NON-BUS	Non-Business Entities	Organizations that influence public life but are not primary service providers	NGOs, Political Parties, Religious Institutions.
CAT-BUSINESS	Business Entities	Private-sector organizations	Business Entities
CAT-ALL-STATE	All State-Related Organizations	Includes at least these IDs: CAT-NAT-GOV, CAT-REG-AUTH, CAT-LOCAL-GOV, CAT-SECURITY. Also includes any entity otherwise classified under CAT-PUBLIC-SVC, CAT-MONOPOLY, CAT-BUSINESS or CAT-NON-BUS that is state-owned, state-controlled, or primarily publicly funded for its operations.	Public Sector, The State.

[Rights #1 - #39 by category]

Category 1: Foundational Governance **6**

1. Treat Every Citizen as an Owner [STOP CONDITION] 6
2. Right to Non-Violent Speech [STOP CONDITION] 7
3. Open Access to All Laws [STOP CONDITION] 8

Category 2: Vital Protections **10**

4. Protect Lives from Immediate Threats [AUDIT EFFECT] 10
5. Defense Against Systemic State Overreach [STOP CONDITION] 11
6. Guaranteed Basic Need [AUDIT EFFECT] 13

Category 3: Citizenship & Migration Control **14**

7. Protection of Citizenship Status [STOP CONDITION] 14
8. Publish All Immigration Statistics [AUDIT EFFECT] 16
9. Set Voting Rules for New Citizens [AUDIT EFFECT] 17
10. Authorization of Visa, Permit and Citizenship Criteria [AUDIT EFFECT] 19

Category 4: Mandate Authorization **21**

11. Voter Approval for Constitution [STOP CONDITION] 21
12. Safeguard Against Mandate Drift [STOP CONDITION] 23
13. Quality Assurance for Public Votes [AUDIT EFFECT] 25

Category 5: Executive Accountability **26**

14. Limit Terms and Immunity for Leaders [AUDIT EFFECT] 26
15. Management Q&A Safeguard [AUDIT EFFECT] 27

Category 6: Systemic Transparency **28**

16. Spending and Contract Transparency Safeguard [AUDIT EFFECT] 28
17. Public Statistics Integrity Safeguard [STOP CONDITION] 29
18. Transparent Tax Impact Metric [AUDIT EFFECT] 30
19. Beneficial Ownership Transparency Safeguard [AUDIT EFFECT] 31
20. Right to Challenge Organizational Identity [STOP CONDITION] 32

Category 7: Environmental Integrity **33**

21. Public Pollution & Waste Data [AUDIT EFFECT] 33
22. Land Surface and Habitat Transparency Safeguard [AUDIT EFFECT] 34
23. Open Access to Global Warming-related Data [AUDIT EFFECT] 35
24. Supply Independence by Trade Distance [AUDIT EFFECT] 36

Category 8: Economic Risk Governance **38**

25. High-Risk Industry Insurance Safeguard [AUDIT EFFECT] 38
26. Monopoly Power Transparency Safeguard [AUDIT EFFECT] 39
27. Tariff Governance Safeguard [AUDIT EFFECT] 40
28. State Support for Foreign Loss Claims [STOP CONDITION] 41
29. The Right to Personal Bankruptcy [STOP CONDITION] 43
30. AI Displacement Readiness Safeguard [AUDIT EFFECT] 44

Category 9: State Structure & Security **46**

31. Law Enforcement Identification & Eligibility Safeguard [AUDIT EFFECT] 46
32. Report Public Emergency Readiness [AUDIT EFFECT] 47
33. No Detention Without Dangerous Conduct [AUDIT EFFECT] 48
34. Safeguard Against Unjustified Surveillance [AUDIT EFFECT] 49
35. The Right to Surveillance Warnings [AUDIT EFFECT] 50
36. Safeguard Against Emergency Overreach [STOP CONDITION] 51
37. Right to Name the State Form [STOP CONDITION] 52
38. Voter Approval for Border Changes [AUDIT EFFECT] 53
39. Compensation Benchmark Transparency Safeguard [AUDIT EFFECT] 54

Category 1: Foundational Governance

1. **Treat Every Citizen as an Owner [STOP CONDITION]**

Standard Definition: Citizens hold the primary ownership stake in all state-related organizations. Employees and elected officials act on the Organization's behalf and must treat every non-violent Owner with professional respect. An Owner's criticism or opinion takes priority over the sensibilities of any state organization or employee.

Operational Functionality & Specifications: No Owner may be prevented from questioning non-violently, voicing criticism, or requesting documentation. No Owner may be subjected to intimidation, threats, administrative retaliation, unauthorized investigation or administrative penalties for doing so. Prohibited Agent conduct includes, but is not limited to: detention, abuse, threats with weapons or force, loss of employment, citizenship revocation, removal of children, psychiatric commitment, or placement under guardianship. These obligations apply to all state-related entities, to every employee and office-holder, whether employed, elected or appointed, at every level, and to third-party contractors [REF:D40 §4]. No extension required: the specification above is complete.

Strategic Justification: This right resolves the problem of failure to recognize stakeholder standing. In any professional organization, an Agent cannot deny the Principal's status. This ensures the sensibilities of service providers / agents / office-holders acting on behalf of the Organization (e.g., law enforcement) do not override the Owner's standing to request evidence + challenge non-compliance to critique the organization. Analogy Company <-> Owner.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE).

Reasons for a request (any): Any instance where an Owner is subjected to adverse action / retaliation (see above), for expressing a non-violent opinion. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1 in serious cases (e.g. prohibited Agent conducts), potentially B2, C1, E. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners acting for themselves or nearest relatives.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

2. **Right to Non-Violent Speech [STOP CONDITION]**

Standard Definition: Owners have the inherent right to express opinions or criticism through verbal, written, or digital channels, whether individually or in groups. No state employee or organization may suppress, monitor, or penalize an Owner for exercising non-violent expression.

Operational Functionality & Specifications: This right covers all digital and paper communication and public demonstrations, whether conducted individually or in groups. Agents (including elected officials) must accept non-violent criticism as a mandatory condition of their employment. Non-violent speech may not be suppressed, monitored, or subjected to adverse action / retaliation. No extension required: the specification above is complete.

Strategic Justification: The formulation of divergent views is an essential component of ownership. This right must be treated as higher-priority stakeholder input in the accountability workflow to any organizational "reputation management" or the personal sensibilities of Agents. Analogy Company <-> Owner.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE).

Reasons for a request (any): Intimidation, administrative retaliation, threats (e.g., job loss, psychiatric commitment), or investigations against an Owner for speech. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1 in serious cases (e.g. prohibited Agent conducts) potentially B2, C1, E. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners acting for themselves or their children.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

3. **Open Access to All Laws [STOP CONDITION]**

Standard Definition: Compliance cannot be expected if the rules are inaccessible. All current and proposed laws, decrees and regulations must be free, downloadable, searchable, and deposited in print. A rule that is not accessible under this standard is not established under it, and an Owner may refuse its applicability and record the refusal.

Operational Functionality & Specifications: Refusal runs until compliant access and notice conditions are restored. It attaches to the immediate conditions — notice, reset, and access to the current text — not to history still within its phase-in period.

Digital access must be searchable, registration-free, provided in unchangeable common formats, and allow for "Data Time Travel" to audit past versions (free DMS).

Phased deadlines run from the first request received under this Right, the date of which is published: current laws available within 1 month; a 5-year history within 6 months; a 25-year history within 12 months; printed deposit within 12 months.

Printed copies are deposited in every town exceeding 100,000 inhabitants, each carrying its issue date and the period it covers. Superseded copies are retained alongside current ones and not withdrawn, so that the printed series is itself the version history. Deposit locations are published.

All new, changed, or deleted laws, decrees, rules and regulations must be published, searchable in the public registry in the free DMS in an unchanged, downloadable format, with a minimum advance notice period of 90 days before becoming applicable or enforceable. Any modification to the published text resets the 90-day notice period from the timestamp of the latest change. Emergency changes are permitted only under explicit emergency status, remain subject to a minimum notice period of 7 days, and must be clearly labeled as emergency measures. Notice periods are not subject to phase-in.

No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: Owners can only follow rules they can access, and centralized free access reduces the cost of compliance for Owners and businesses. A rule that cannot be read before it binds has not been given to the people it binds; it has been applied to them.

Publication is defeated by amendment, which is why any change resets the notice period. A digital text is held and edited by the same party it binds; a printed copy is dated and outside their reach once issued, and is the reference the digital version is checked against. Building

an archive takes time; publishing a rule before enforcing it does not — which is why the history phases in and the notice period does not.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH)& Local Government(CAT-LOCAL-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, A2. A3 where an obligation was enforced against the Owner on a rule failing this standard. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

Category 2: Vital Protections

4. Protect Lives from Immediate Threats [AUDIT EFFECT]

Standard Definition: Keeping Owners alive is the first obligation of the country, state or community. It prepares for danger that arrives, and it does not create danger of its own.

Operational Functionality & Specifications: This Right is a principle, not a specification. It states the posture every Agent holds toward an Owner: the Owner's life is not a cost the Organization may weigh against its own purposes. The examples below illustrate that posture; they are not its limit.
A warning that does not arrive — a danger the Organization could predict, a system built to predict it, and a chain that stops before the person standing in its path.
A service that cannot reach — ambulance, hospital, medicine, water or police sufficient on paper and not where the Owner lives.
A war of choice — force used outside the territory where the Organization was not attacked. Owners are not usually killed where it is fought. They are killed as soldiers, and later, when the war reaches the territory it was started away from. The phrase is used plainly because a softer one would be read as leaving it out.
This Right does not specify. It is the standard the specifications are measured against.
No extension required: this Right is tested by the act itself — what took place, and whether it did.

Strategic Justification: Survival is the only thing an Owner is owed that cannot be made good afterwards. Everything else in this framework assumes the Owner is alive to use it. Most of what keeps an Owner alive is ordinary — a number that answers, a warning that arrives in time, water. It fails quietly, and the failure is visible first to the person it falls on. An Organization can meet every reporting standard and still take the decision that kills its Owners. That decision is made by people, and this Right states what they owe before they make it.
This Right takes no position on any particular war, deployment or decision. It states what may not be traded away in making one.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH)& Local Government(CAT-LOCAL-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners acting for themselves or their children.

5. **Defense Against Systemic State Overreach [STOP CONDITION]**

Standard Definition: An Owner's refusal is absolute where a state Organization they co-own, or its Agent, threatens their life, health, freedom of movement, or assets on the basis of identity, status, or non-violent activity. The Organization never held authority to do so, and no statute, decree, court ruling or emergency order can confer it. Such an order is unauthorized the moment it is made.

Standardized Indicators of Systemic Misconduct (Persecution Criteria):

- **Demographic Identification:** Targeting based on ethnicity, religion, or sexual orientation (e.g., historical systemic purges or genocides).
- **Socioeconomic Status & Professional Classification:** Persecution directed at specific social groups, including Owners experiencing homelessness or those within specific professional categories.
- **Belief Systems & Political Affiliation:** Retaliation based on an Owner's political views or philosophical convictions.
- **Exercise of Ownership Rights:** Preventing fundamental non-violent activities — free speech, public demonstrations, industrial strikes — or intimidating or administratively retaliating against an Owner for them.

Operational Functionality & Specifications: Local legality is not a defence under this standard. Where an action meets the Persecution Criteria, it fails this Right whether or not an internal statute, decree, court ruling or emergency order authorizes it, and the instrument relied on is recorded as part of the finding [REF:D41, Section 1].

A finding is established by the targeting basis and the act, not by the Owner's ability to contest either at the time. Where the Owner cannot act, cannot be reached, or does not survive, the record stands in their place: what was done, to whom, on what stated basis, by which office, and when. It is made and preserved whether or not any request is filed.

No extension required: this Right is tested by the act itself — what took place, and whether it did.

Operational note (safety): The refusal is absolute. The decision to voice it to an Agent who can act against you is not, and is yours alone. Where the Organization is High-Coercion, the default is Shadow Audit: the record is made privately and preserved, and no request is filed [REF:D53, Section 4].

Strategic Justification: History demonstrates that legal structures can be subverted to validate the destruction of specific demographics. A regime of this kind does not act outside

its own rules; it rewrites them first, and every step afterwards is signed and lawful on its face. A standard that defers to local legality therefore fails at the only moment it is needed.

This Right keeps the Principal's authority intact where the Agent has modified internal statutes to authorize misconduct, and records those statutes as evidence of the failure rather than as an answer to it. Recovery often fails.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Law Enforcement(CAT-SECURITY).

Reasons for a request (any):

Direct: Murder, execution, unauthorized detention, jailing, kidnapping, placement in camps, torture, or the forcible removal of an Owner’s children.

Indirect: Systematic censorship or silencing of information regarding imminent catastrophic events (e.g., industrial or military accidents, pandemics) to hide organizational failure. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, A2, A3, in serious cases (e.g. prohibited Agent conducts) potentially B2, C1, C2, C3, D1, E. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners acting for themselves, their children, or on behalf of Owners who are missing or incapacitated.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

6. **Guaranteed Basic Need [AUDIT EFFECT]**

Standard Definition: The Organization already sets minimum conditions for the people it holds in custody, and for the people it accommodates under reception arrangements. Owners may require those standards to be published beside the conditions available to an Owner in need.

Operational Functionality & Specifications: Published together, each with its source document and date: (a) the minimum conditions applied to persons in state custody; (b) the same for state-provided reception accommodation; (c) the conditions available to an Owner in need, with the criterion that decides who qualifies. Items covered: water, food, shelter, sanitation, heating, light, emergency medical care. For each item, the value in (c) is published beside (a) and (b), and where it is lower the difference is stated as a figure. Each entry states where the service is provided, and the distance to the nearest point of provision where it is not local.
This is a disclosure benchmark. It requires no standard to be raised and no service to be created.
No extension required: the specification above is complete.

Strategic Justification: A country's core mandate is to ensure the survival of its Owners. The comparison is not invented here: an Organization that detains a person writes down what keeping that person alive takes, and does the same for people it accommodates. Both documents already exist and both are its own. Published beside what an Owner in need receives, they settle the question without a number from this framework. "Adequate" would be settled by whoever holds the budget.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners acting for themselves or their close family members.

Category 3: Citizenship & Migration Control

7. Protection of Citizenship Status [STOP CONDITION]

Standard Definition: Withdrawal of an Owner's citizenship is unauthorized where it leaves them stateless, or where the citizenship was acquired at birth; the Owner may refuse its applicability and record the refusal. Relinquishment obtained by organizational pressure is treated as withdrawal. Withdrawal from any other Owner requires 1 year's notice.

Operational Functionality & Specifications: The finding stands on the act, independent of whether the Owner contests it or is able to. Where the Owner can act, they refuse applicability and record it; where they cannot, the record is made and preserved regardless [REF:D40].

Relinquishment is obtained by organizational pressure where employment, benefits, permits, residence, custody or family status is conditioned on it, whatever form the record takes. No Owner may be required to renounce another citizenship held.

This is a lower bar, not a judgment on any case. It bars two outcomes — withdrawal producing statelessness — and takes no position on whether a grant was sound or what else may follow. Prosecution, loss of office, loss of licence, forfeiture and ordinary sanction are unaffected. Stricter protection remains compliant.

No extension required: this Right is tested by the act itself — what took place, and whether it did.

Strategic Justification: Agents cannot terminate the status of the Principal. Citizenship is the membership that makes an Owner an Owner, and once withdrawn every other Right in this framework goes with it.

Statelessness is the end state the unauthorized limb is built against. A person belonging to no Organization has no forum anywhere, no right to work, reside or travel, and no state obliged to receive them — the condition in which the other Rights have nothing to attach to. It is also the one outcome that resolves nothing for either side: the person remains present, now without status and unremovable. Citizenship acquired at birth is covered on separate ground: the Owner never entered the relationship by agreement, and what an Organization did not grant on terms it cannot withdraw at will.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Withdrawal of citizenship leaving the Owner stateless, or withdrawal of a citizenship acquired at birth — including relinquishment obtained by organizational pressure. Withdrawal from any other Owner without 1 year's notice. A requirement to renounce another citizenship held. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, A2, A3 in serious cases (e.g. prohibited Agent conducts), potentially B2, C1, C3, D1, E. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners acting for themselves or their children or parents.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

8. **Publish All Immigration Statistics [AUDIT EFFECT]**

Standard Definition: Owners are entitled to regular, free, and independently audited statistics regarding immigration volumes, refugee status, and new citizenships. Data should include geographic distribution to ensure transparency in demographic shifts.

Operational Functionality & Specifications: Reports should be monthly, unchangeable, and contain 8 years of historical data. Data should include anonymized geographic distribution data aggregated to districts/regions (no address-level location data) grouped by citizenship, sex, and age. Accuracy should be confirmed by two independent consulting firms.
Free, no registration, bulk-downloadable. Corrections published as dated revision entries, never edits.
No extension required: the specification above is complete.

Strategic Justification: Transparency enables Owners to track demographic shifts and articulate informed criticism.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

9. Set Voting Rules for New Citizens [AUDIT EFFECT]

Standard Definition: The right to vote and to hold state office may require four consecutive years of lawful residence in the country, applied equally however citizenship was acquired, including by descent and by birth abroad. Citizens who can already vote without ever having met this condition enter a seven-year pause from the date the condition takes effect, or until they meet it. Citizenship acquired before the age of majority through a parent's ordinary residence is not covered. Citizenship itself is not affected.

Operational Functionality & Specifications: Published monthly as anonymized aggregates, unchangeable, with eight years of historical data and the rolling twelve-month total shown in each release: citizenships granted by route (residence, descent, marriage, territorial transfer, other); the share granted to people not living in the country; those grants grouped by country of birth and by any other nationality held; and the number of citizens currently within the seven-year pause.

No individual-level or address-level data; geographic data aggregated to districts or regions. Minimum count 10 for origin, 5 for route. A figure below its minimum appears only in the twelve-month total, with the monthly cell marked suppressed; groups still below after twelve months go to "other" with the number of groups stated, so totals reconcile.

No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: It is an anti-dilution right. Expanding borders or granting citizenship to people who do not live in the country can import a supportive electorate and shift the vote share without any change in the resident population. Seven years is longer than one full election cycle — generally four to six years — so new citizens cannot decide the election that follows. The origin grouping is the detection point: a sudden concentration in one country of birth or prior nationality is what this kind of expansion looks like in the data, and a total alone hides it.

Why a fixed period rather than a vote. Requiring the existing voters to authorize an expansion is the cleaner principle and the worse instrument: a government that benefits from the expansion will not schedule the vote. A fixed period runs on the calendar, ends by itself, and leaves the affected person a second route under their own control — four consecutive years of residence.

Why it reaches backwards. A condition applying only to future grants is defeated by granting early. In a small country this is not marginal: a neighbour with several times the population can be granted citizenship in numbers that permanently outvote the original

electorate, after which no election reverses it and no restriction on holding office helps. Only the vote is suspended — citizenship, residence, work, property and family rights are untouched, and the vote returns on residence or on time.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

10. Authorization of Visa, Permit and Citizenship Criteria [AUDIT EFFECT]

Standard Definition: The conditions for granting visas, work permits, protection status and new citizenships are terms of membership. Changes to them require authorization by the Owners in advance.

Operational Functionality & Specifications: The criteria in force are published, with the date each version took effect. Published per route: the qualifications required, including any local language requirement; duration and renewal; the work, sector or employer it is tied to; permitted working hours; for protection routes, the waiting period before work is permitted and any restriction on sector or employer; any cap on the number granted; the taxes and social contributions payable, and any that do not apply; and the conditions for family members and for later permanent residence or citizenship.
Where a parameter does not apply to a route, that is published with the reason, not omitted.
Where criteria are set above the national level, the Organization publishes what applies and names the instrument. Where a criterion is set at regional level, that authority publishes it on the same terms. An authority that only applies criteria set elsewhere publishes the instrument it applies.
Where the taxes or social contributions differ from those applying to citizens, the ratio under Right 18 is published for each set, at the same baseline [REF:D32-R18-EXT]. The figure describes the rules, not the people they apply to.
Free and downloadable. Current criteria and dataset within 3 months of the first request; versions back 25 years within 12 months.
A change to any of these is material. Right 12 does not reassess that.
Without authorization, the Organization continues granting under the published criteria — a zero-program. Suspension is itself a change and is not required here.
No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: Visa and permit criteria set how many people may work in the country, and on what terms. New citizenships carry the same effect, and the electoral one Right 9 describes.
Both are dilution. A new citizen takes a share of a fixed total, and every existing share falls by arithmetic. Permit terms divide nothing, but terms differing from those an Owner works under — in hours, tax, or contributions — change what the two cost an employer, and that difference reaches the Owner's wage. This Right claims no effect in either case. It claims the change is the Owners' to authorize.
A material change here affects wages, employment, and the current and future earning

capacity of Owners who work or study. It falls on Owners who had no chance to weigh it when they voted. That is what makes such a change material under Right 12, and why authorization comes in advance rather than afterwards. Criteria that become visible only after the grants are made cannot be weighed while the decision is still open.
This Right takes no position on what the criteria should be.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH)

Reasons for a request (any): A change to the criteria without authorization. Criteria unpublished or undated. A deadline passed without the corresponding criteria or history available. A parameter omitted without the entry stating it does not apply. Grants made or suspended on criteria that are not the published set. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2 where the failure is publication. A1, A3 where a change was applied without authorization. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Category 4: Mandate Authorization

11. Voter Approval for Constitution [STOP CONDITION]

Standard Definition: Any change to the constitution requires authorization by the Owners in advance, by public vote. A change made without it is unauthorized, and an Owner may refuse its applicability and record the refusal. Authorization obtained afterwards does not cure it.

Operational Functionality & Specifications: The constitution is the base legal framework from which all other laws derive. This Right applies to that instrument only. Ordinary legislation is outside it.

The proposed text is published in fixed, unchangeable form at least 270 days before the first day on which any vote may be cast. Any material change to the published text restarts the full period.

Authorization requires YES votes from at least 50%+1 of all possible voters — every Owner entitled to vote at the start of the period. The definition and count are published at the start and unchanged through it; any change carries a dated entry and restarts the period.

The vote meets Right 13 and its extension [REF:D32-R13-EXT].

The finding stands on the act. Where the Owner refuses applicability, the refusal is recorded [REF:D40]. An Owner may record a change as unauthorized at any time afterwards; no period of elapsed time establishes it.

No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: The constitution is the cornerstone of all organizational rules and should be stable. This prevents political factions from stripping rights or changing state forms overnight.

Authorizing every law by public vote is not realistic and is not proposed here. This one is, and it is the instrument that determines what every other law may contain — the one that cannot be measured against anything else. Every other authorization is read against the constitution; change it without a mandate and the standard by which authorization is judged has itself been altered.

The threshold is counted against all possible voters, not against votes cast. The share of those voting that this requires rises as turnout falls, so a change to the foundational rules cannot be carried by a well-organized minority on a quiet day.

The 270 days and the public vote attach a cost to each change. Neither limits how often a constitution may be amended, and this Right takes no position on that. Stability follows from the cost rather than from any rule requiring it. The cost falls entirely on the practice of treating the base framework as ordinary legislation with a higher status: amended at short notice, repeatedly, as a route around the authorization each change would otherwise need.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): A constitutional change taking effect without a prior mandate meeting this standard. A change declared authorized without YES votes from at least 50%+1 of all possible voters. Proposed text published later than 270 days before the first day of voting, or materially altered without restarting the full period. The electorate definition or count unpublished, altered during the period without restarting it, or absent from the published result. A vote failing Right 13. Applicability asserted against an Owner after a refusal is recorded under this Right. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, A2, A3 in serious cases (e.g. prohibited Agent conducts), potentially B2, C1, C2, C3, D1, D2, E. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

12. Safeguard Against Mandate Drift [STOP CONDITION]

Standard Definition: Elected management is authorized only for the programs presented in its election program, and appointed management only for what the authorizing mandate carries. A material investment or policy absent from that authorization is unauthorized, and an Owner may refuse its applicability and record the refusal.

Operational Functionality & Specifications: Appointed management is bound by the election program of the body that appointed it, or by the zero-program where none exists. It holds no authorization of its own and cannot hold authority its appointing authority did not have.

Where an association or company puts a budget or annual plan to its Owners for approval, that instrument stands in place of an election program.

Election programs are published in fixed, unchangeable form, available to all voters, at least 33 days before the first day on which any vote may be cast. The election program and the vote outcome together constitute the mandate.

Material means a measure that could not have been anticipated from the election program and that an Owner would reasonably have taken into account when voting. Ordinary administration under existing rules is not drift.

Without authorization, the permissible course is to continue operating under existing laws and procedures — a zero-program. Departure from a zero-program, or from an approved program, requires authorization granted in advance by a public ballot on that question alone.

The finding stands on the act. Where the Owner refuses applicability, the refusal is recorded [REF:D40].

No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: Elected employees and management are authorized for the programs they presented, not for the term. A program amendable after the count is not a program, and approval of a stated program is not a transfer of open authority.

Authorization runs down the chain, not sideways: an appointed body acts on the mandate it was given, and where its appointing authority has none, it operates under existing rules.

This Right takes no position on the merits of any measure; it asks only whether it was authorized. Where authorization is absent, the Organization continues under existing laws

and procedures, and management seeking to go further obtains authorization in advance. Prevents mission creep and unauthorized spending.

The 33 days are a full month to read the program, plus the voting period itself — commonly one or two days. A month is counted at 31 so the period holds whichever month it falls in, and the voting days are added because voting is when the program is used. The period is counted to the first day on which any vote may be cast, so a full month remains available to every Owner regardless of when they vote.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE) & Monopolies(CAT-MONOPOLY) & Non-Business Entities(CAT-NON-BUS) & Business Entities(CAT-BUSINESS).

Reasons for a request (any): A material investment or policy implemented without appearing in the election program or obtaining advance authorization on that question. An election program published later than 33 days before the first day on which any vote may be cast, in alterable form, or not available to all voters. A program altered after publication without a restated version and date. Appointed management acting beyond the mandate of its appointing authority, or beyond the zero-program where none exists. Applicability asserted against an Owner after a refusal is recorded under this Right. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, A3. A2 where the failure is publication of the program. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

13. Quality Assurance for Public Votes [AUDIT EFFECT]

Standard Definition: Owners may reserve acceptance of the result of any public vote until the conditions of the vote and the count records are published, and every quality assurance check is published and met.

Operational Functionality & Specifications: Electorate definition, publication levels, count record format, sampling method, significance level, release sequence, escalation and retention per Doc 32 [REF:D32-R13-EXT]. A reservation recorded under this Right does not annul a vote, require it to be re-run, or oblige the Organization to adopt any particular voting system or technology. The Owner is not required to perform a recount.

Strategic Justification: Judging a large batch from a sample against a stated significance level is how manufacturing and scientific field testing have worked for decades. This Right applies that established method rather than inventing one, so those who already run such checks recognise their own trade. No production line is cleared before its sampling is finished and no bridge opens before its tests; a result announced before its checks are complete is open to the same revision. The sample tests the count — it does not reach ballots altered before counting, which is why the conditions of the vote are published alongside it.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

Category 5: Executive Accountability

14. Limit Terms and Immunity for Leaders [AUDIT EFFECT]

Standard Definition: Leadership in state organizations is time-limited to prevent systemic corruption. Once the term limit is reached, individuals should serve a continuous four-year period without any legal immunity to ensure they remain accountable for their tenure.

Operational Functionality & Specifications:

The 20-Year Threshold: Owners may request Termination of Employment for any individual holding immunity for 20 weighted years without a continuous 4-year immunity-free break.

Weighted Seniority: Years as President, Minister, or Head of Parliament count with a factor of 1.5. (e.g., 4 years as Minister = 6 weighted years).

Sabbatical Requirement: Following tenure, a continuous 4-year sabbatical with zero immunity (legal, diplomatic, or international) and no state employment is mandatory.

Financial Settlement: The Agent is entitled to salary compensation until the end of the contract period (max 5 years).

Tenure register. Published per person holding or having held an immunity-protected role: role and body, start and end dates, the factor applied, weighted years accumulated to date, and any continuous immunity-free period with its dates. Published annually, retained 25 years. Free, no registration, bulk-downloadable. Corrections published as dated revision entries, never edits.

No extension required: the specification above is complete.

Strategic Justification: Tenure increases the probability of corruption and dictatorship. This ensures no Agent hides behind immunity for decades.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

15. Management Q&A Safeguard [AUDIT EFFECT]

Standard Definition: Management should regularly report live and in person, then take open questions from independent media, on the record, so information reaches Owners unfiltered by public relations.

Operational Functionality & Specifications: Cadence, presence, question time, access, follow-up and record per Doc 32 [REF:D32-R15-EXT]. The session is tested, never the content of an answer.

Strategic Justification: Taxes, public services, prices Owners cannot avoid, security and environment carry high stakes, so Owners need frequent contact with management. Questions asked live and kept on record are the only way millions of Owners can inspect it.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE) & Monopolies(CAT-MONOPOLY).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Category 6: Systemic Transparency

16. Spending and Contract Transparency Safeguard [AUDIT EFFECT]

Standard Definition: Owners may request disclosure of the Organization's activities and agreements — procurement, contracts, invoices and payments, financial obligations, projects, subsidiaries and outsourcing, transfers and grants, and personnel spend — and may audit what is published against the disclosure standard. Non-disclosure is recorded as a finding; it does not block any action, and disclosure creates no obligation to alter, cancel or justify any spending decision.

Operational Functionality & Specifications: The benchmark is one central public record, searchable, downloadable in bulk, and free of fees, registration and tracking. Only operations meeting a published deep military or intelligence confidentiality standard fall outside it, and the withholding is itself recorded. See technical specs in Doc 32 [REF:D32-R16-EXT].

Strategic Justification: Spending that no one outside the Organization can see cannot be checked by anyone outside it. An Owner cannot identify a contract awarded above market, a subsidiary absorbing costs, or a payment with no recorded purpose unless the record exists, is complete, and can be processed at scale. Disclosure does not prevent misuse; it makes misuse findable by those who bear its cost.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

17. Public Statistics Integrity Safeguard [STOP CONDITION]

Standard Definition: Owners may require the Organization to publish, as a recurring statistical release, the figures describing its own condition — such as population, debt and spending, assets, and taxes collected. Every monetary total is published alongside its value per resident, per citizen, per taxpayer and per citizen-taxpayer.

Operational Functionality & Specifications: A figure not published under this standard is not established, and where it is the stated basis for an obligation directed at an Owner, that Owner may refuse its applicability and record the refusal until it is. See technical specs in Doc 32 [REF:D32-R17-EXT].

Strategic Justification: Enables Owners to monitor demographic, financial and organizational health. A total resists judgment: it compares to nothing an Owner holds. Divided by the people carrying it, the same figure comes down to human scale. As all referenced statistics already exist it is an easy request to handle.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2, A1. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

18. Transparent Tax Impact Metric [AUDIT EFFECT]

Standard Definition: The objective is to provide Owners with a single, audited figure that represents the work-hour cost of the state's fiscal policy. By converting abstract percentages into a "work-hour ratio," Owners can immediately interpret the gap that taxes and social contributions open between the price of their work and their net salary.

Operational Functionality & Specifications: The Organization should compute and publish a Service Self-Purchase Ratio (SSR): the number of hours an employee should work to afford one hour of the same work purchased as a service, after all mandatory taxes and contributions. The underlying data set should be published in a form that permits independent recomputation. The Owner is not required to perform the calculation. Publication does not oblige the Organization to change any tax rate. See technical specs in Doc 32 [REF:D32-R18-EXT].

Strategic Justification: Simplifies complex tax codes so Owners and businesses can interpret real tax ratios. Because the figure is a ratio of hours, it compares across jurisdictions without currency conversion, purchasing-power adjustment, or deflators.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

19. Beneficial Ownership Transparency Safeguard [AUDIT EFFECT]

Standard Definition: Owners may require the Organization to publish who ultimately owns the entities it contracts with, and the ownership interests held by its own Agents. An entity whose ultimate owners are not disclosed is recorded as such.

Operational Functionality & Specifications: Beneficial owner means a natural person who ultimately owns or controls the entity — through holdings of 25% or more, through voting rights, or by other means. A chain ending in another company is not a disclosure.
Published per counterparty: legal name and registration; the natural persons identified, with the nature and size of each interest; the date the information was obtained; and, where none could be identified, that fact with the reason.
Agents who decide, approve or sign contracts publish their own ownership interests, in any country, on taking office and on change.
Free and downloadable. New entries within 90 days of the contract; retained 25 years.
No extension required: the specification above is complete.

Strategic Justification: A contract records what was bought and from whom. It does not record who was on the other side.
Where that is unknown, an Owner cannot see whether a contract went to the person who decided it, to their family, or to a party the Organization is at the same time regulating. Those are the cases disclosure exists to make findable.
A chain of companies is the ordinary method of concealment, which is why the disclosure runs to natural persons.
The register costs the Organization very little to keep. A contract awarded to a party nobody can see costs the Owners far more. The usual objection to disclosure is its administrative cost, and that is the smaller number.
This Right takes no position on who may hold a contract.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]:A2 where the failure is publication. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

20. Right to Challenge Organizational Identity [STOP CONDITION]

Standard Definition: No Owner may be subjected to retaliation, investigation or administrative penalty for publicly stating that an organization's conduct departs from its stated values, name or declared purpose. This applies to non-business organizations, including NGOs, political parties and religious institutions, so that "false flags" and misleading adjectives are not insulated from comment.

Operational Functionality & Specifications: Owners are protected from retaliation when calling out "false flags" or behavior-promotion discrepancies. Fabricated evidence remains actionable against the Owner.

No extension required: the specification above is complete.

Strategic Justification: Prevents the "hijacking" of votes via misleading adjectives (e.g., historical example: Germany 1933-1945).

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE) & Non-Business Entities(CAT-NON-BUS)

Reasons for a request (any): Retaliation, investigation, or repression of the Owner for critique. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A1, B2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

Category 7: Environmental Integrity

21. Public Pollution & Waste Data [AUDIT EFFECT]

Standard Definition: Management should provide regular, independently verified reports on air, water, and soil quality. This includes detailed data on waste management, recycling rates, and hazardous materials.

Operational Functionality & Specifications: Daily air/water reports required (e.g., toxic/radioactive particles, microplastics); quarterly reports on waste (produced, stored, recycled) and hazardous/nuclear materials. Includes 25 years of historical data and yearly audits. Data reporting should be established within one year from the first request.
Free, no registration, bulk-downloadable. Corrections published as dated revision entries, never edits.
No extension required: the specification above is complete.

Strategic Justification: Owners require continuous monitoring of industrial impacts on daily life to raise transparency.

Accountable Entity (Relationship): Regional Authority(CAT-REG-AUTH).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

22. Land Surface and Habitat Transparency Safeguard [AUDIT EFFECT]

Standard Definition: Owners may require the Organization to publish, as a recurring account, how its territory divides between surface classes and how each class changes from period to period — including the share that is sealed, the share under vegetation and water, the share held by hazardous installations, and the share under each protected-area designation. This is a disclosure benchmark; it does not require any land-use decision to be taken, changed or reversed.

Operational Functionality & Specifications: Classes, holder groups, ratios, cadence and format per Document 32 [REF:D32-R22-EXT]. Published for each reporting unit, not as a national average. No exemptions: every unit of area is counted once, whatever its use or status, so that accounts add up from city to country to continent. A sensitive site is counted in the totals; only its location may be withheld. Figures may be estimated where a register is incomplete, with the method stated and held constant.

Strategic Justification: Land is finite and allocation runs one way. It advances one small decision at a time, and no single decision shows the direction. The species displaced appear in no account; the land they lost does. Some of it does not return within a lifetime: sealed ground, land taken by a hazardous installation, cleared forest and wetland. Sealing fails twice: rain reaches the drain in minutes instead of the ground, and the surface returns the day's heat after dark. The account makes the direction visible, class by class, for the place an Owner lives.

This Right sets no target and prices nothing. What land is used for is a management decision; that the allocation is counted and published is the Owner's to ask.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH) & Local Government(CAT-LOCAL-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

23. Open Access to Global Warming-related Data [AUDIT EFFECT]

Standard Definition: Owners may require the Organization to publish, as a continuing measurement record, the environmental conditions of the places where Owners live — temperature of air, ground, sealed surfaces and water, together with precipitation, humidity and atmospheric integrity — measured daily at fixed, published locations, retained as a long series, and retrievable as measurements rather than as summaries.

Operational Functionality & Specifications: Domains, depths, station register, cadence, retention and archive method per Doc 32 [REF:D32-R23-EXT]. Readings are published at the granularity of the place, not as a national or regional average. The record is published; interpretation of it is not part of the obligation, and no commentary may be a condition of access. Data reporting should be established within one year of the first request. Publication does not oblige the Organization to change any land-use or building decision. The obligation covers every station the Organization operates, funds or licenses, at whatever level of government it sits, including stations held by local road and water authorities [REF:D32-R23-EXT].

Strategic Justification: A changing climate reaches an Owner as local conditions, and that is the only level at which an Owner can respond — what to build with, what to plant, where to live, whether to insure. Those decisions are slow and hard to reverse, so they need readings for the place and a series long enough to show direction. Local conditions are also partly made by what is built, and the body publishing the readings also decides what gets built.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

24. Supply Independence by Trade Distance [AUDIT EFFECT]

Standard Definition: Owners may request disclosure of how far the goods they depend on have travelled, and of the levies already applied to them, so that dependence on distant supply is visible rather than assumed. This is a disclosure benchmark; it does not require any tax to be introduced, changed or removed.

Operational Functionality & Specifications:

- Frequency and source: quarterly, with a yearly summary, from customs and balance-of-payments data the Organization already collects. Aggregated totals only; no individual trader or shipment may be identifiable. Free, bulk-downloadable.
- Distance rungs, published as two parallel views of the same data:
    - Country view: up to 500, up to 2,000, up to 6,000 nautical miles, over 6,000 nautical miles, measured as the shortest distance between the territory and the partner country.
    - Regional view: within the economic region, then up to 500, up to 2,000, up to 6,000 nautical miles, over 6,000 nautical miles, measured from the economic region's outer border.
    - The economic region is the customs union the Organization belongs to; where it belongs to none, only the country view is published, and that is stated. Both rung tables are published and change only when borders or membership change.
- Goods: imports and exports by value and volume, per partner country and rung, assigned by country of origin, not country of consignment, and filterable by the standard product classification (for example energy, ores, machinery, food).
- Services (including software): a separate table of imports and exports by value, per partner country and rung, as far as balance-of-payments data records it.
- Transit: goods passing through the territory are not counted as imports or exports; they are published separately by volume, route and mode (pipeline, rail, road, sea, air).
- Start: first publication within 1 year of the first request.
- History: the first publication covers the previous 10 years, from the records already held.
- Retention: retained 25 years; corrections published as dated revisions, never edits.

Whether to price or restrict trade by distance is a management decision outside this framework.
No extension required: the specification above is complete.

Strategic Justification: A supply chain's length is a risk the Owner carries and cannot see from the shelf price: the longer the distance, the greater the dependence and the environmental load.
The figures already exist: customs and statistics offices record every import and export with its country of origin, value and volume. What is missing is one central publication that brings them together and sorts them by distance.
A trade balance by distance shows, quarter by quarter, whether the territory is becoming more self-supplied or more dependent, and where trade flourishes. Transit is shown apart because a route through the territory is a dependence in both directions. It takes no position on whether any trade should be taxed or restricted.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Category 8: Economic Risk Governance

25. High-Risk Industry Insurance Safeguard [AUDIT EFFECT]

Standard Definition: Owners may request disclosure of the insurance held for activities capable of catastrophic harm — the insurer, the limit, the phases covered, and the maximum-loss analysis the limit is set against. This is a disclosure benchmark; it does not require any activity to be insured, stopped or changed.

Operational Functionality & Specifications: See technical specs in Doc 32 [REF:D32-R25-EXT].

This is a non-binding request channel, not an enforceable policy.

Strategic Justification: An Owner carries the uninsured part of a catastrophic loss and cannot see it from outside. Where the cover is far below the loss the operator's own analysis predicts, or where no such analysis exists, the difference is not absent — it has been transferred to the Owners, and it is priced into nothing. Publication does not create cover. It makes the transfer visible while there is still time to act on it. The cost of cover is set by the insurer, not by this framework: a rare hazard is cheap to cover and a frequent one is expensive, priced by a party with its own money at stake — a party that also inspects, and reprices what it finds.

Accountable Entity (Relationship): National Government (CAT-NAT-GOV) & All State-Related Organizations (CAT-ALL-STATE) & Monopolies (CAT-MONOPOLY) & Business Entities (CAT-BUSINESS).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

26. Monopoly Power Transparency Safeguard [AUDIT EFFECT]

Standard Definition: Where an Owner has no feasible alternative to a provider, its prices and terms are public power. Owners may request disclosure of its pricing groups, special arrangements, input costs, surplus and contracting chain, whatever its form. This is a disclosure benchmark; it sets no price.

Operational Functionality & Specifications: Test and fields per Doc 32 [REF:D32-R26-EXT].

Strategic Justification: A customer (a citizen, an Owner) who cannot leave cannot discipline a price by leaving. Disclosure makes overpricing and insider discounts findable.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Monopolies(CAT-MONOPOLY).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

27. Tariff Governance Safeguard [AUDIT EFFECT]

Standard Definition: This right covers two functions of tariff governance. (a) Stability audit: where an Organization applies tariff measures, Owners may verify that each is registered, fits a category published in advance, is announced in advance with a domestic impact analysis, and stays in place for a minimum period. (b) Proposal channel: Owners may submit a calibrated tariff proposal, or a non-binding objection to a premature reduction, in a standardized format. Neither function evaluates whether a tariff is correct or necessary.

Operational Functionality & Specifications: See technical specs in D32 [REF:D32-R27-EXT]. (a) audits traceability and stability, not substance. Categories and every new measure or modification are published at least 90 days ahead; a measure stays unchanged for at least 365 days. The Organization sets its own categories; the tier scale in D32 is a reference for Owner proposals, never a test of the Organization's rates. Each miss is recorded as TCORF non-compliance and obliges no change to any tariff. (b) is a non-binding request channel, not an enforceable policy. It creates no obligation to adopt a proposal, assess its merits, or respond substantively; the only duties are to accept intake, register, route, preserve and acknowledge under D40.

Strategic Justification: Untraceable or abruptly reversed trade measures transfer risk onto Owners and businesses, whichever direction the change runs. Predictability and a documented decision record are auditable; the merits of any given tariff are not. Where a proposal states a tier, the tier records how far the conduct reaches into the Owner's country, not how serious it is.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

28. State Support for Foreign Loss Claims [STOP CONDITION]

Standard Definition: If a foreign entity causes death, injury, or material loss to an Owner on national territory, the Organization is obligated to register that loss and to represent and support affected Owners in pursuing compensation, handled as an insurance claim focused on life and property restoration. The Owner proves the loss, not the cause. Where the Organization takes exclusive representation, it may not settle, waive, or extinguish a registered claim without a published and funded distribution mechanism in place.

Operational Functionality & Specifications: The loss is handled as an accident claim: the Owner itemizes, the claim is registered, and the responsible entity pays. Where that entity holds no insurance, or cover below the claimed sum, the shortfall is pursued against the entity itself and its assets. Registration begins on the Owner's submission and continues while the loss-causing events continue. Otherwise the claim process should start within 1 year of the request (acknowledging 1–6 months for evidence gathering). An Owner may submit their own itemized record at any time; the Organization registers it unaltered. Injury, property and housing loss are claimed on documented damages, with no ceiling. For loss of life the claimed sum should not fall below 151,880 Special Drawing Rights per person, or the current Montreal Convention figure, whichever is higher, payable to the nearest family member. The Organization may retain up to 15% of each amount recovered to cover the cost of pursuing the claim. At least 85% of every amount recovered is transferred to verified victims or heirs, distributed pro rata across verified claims, with the ratio and a distribution log published.

Boundary: The claim lies against the responsible entity and its assets — never against a population, and never against individuals by nationality. This right authorizes no use of force and takes no position on the justification for any event.

No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: Every other activity capable of catastrophic harm is insured. An airline owes 151,880 Special Drawing Rights for a passenger killed, with no fault to prove. A state causing comparable harm carries no cover, so the loss stays where it landed — on the person it fell on. The sum is a floor, not a valuation and not a cap: the amount that exists in advance, so a family is not left waiting for a decision taken afterwards by the party that caused the loss. Fixed rather than scaled to local earnings, it is roughly 3 years of median earnings in a wealthy country and roughly 30 in a poor one, pricing every life the same — the same floor Right 25 applies [REF:D32-R25-EXT]. An Owner has no forum against a foreign state; representation by their own Organization is the only route, which is why

removing it silently is the failure this right is built against. Recovery often fails. The right still works by establishing what was owed, to whom, in a form that survives.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Failure to represent interest, failure to register a submitted claim, extinguishment of a registered claim without a published and funded distribution mechanism. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, B2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners for themselves or family members.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

29. The Right to Personal Bankruptcy [STOP CONDITION]

Standard Definition: An Owner may file for personal insolvency on conditions comparable to those available to a company. Where no such route exists, that absence is the finding.

Operational Functionality & Specifications: The benchmark is a route that reaches discharge: who may file, on what grounds, what is protected during the procedure, how long it runs, and what is written off at the end. A procedure with no discharge is not an insolvency route.
Where no route exists, the audit baseline for establishing one is 2 years from the first request.
This Right names no act an Owner can refuse. The label marks a failure an Owner may decline to accept as settled, and record. Whether to say so, and to whom, is the Owner's decision alone [REF:D53, Section 4].
No extension required: the specification above is complete.

Strategic Justification: A bank can fail and be resolved. A company can be wound up and the people in it continue. A state can default and restructure. The Owner alone has no route out, and carries the debt for life.
Without discharge, a debt does not stay the size it was. Unpaid interest is added to the principal, penalty rates then apply to the larger sum, and collection and enforcement costs are added again. A debt of a few months' earnings can pass several years' earnings within a few years, and there is no point at which it ends.
The person stays inside the economy and outside it at once: unable to hold an account, sign a contract, or earn above the garnishment line without the surplus being taken.
This Right takes no position on what should be written off, or on what terms.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

30. AI Displacement Readiness Safeguard [AUDIT EFFECT]

Standard Definition: Owners have the right to regular, independently audited reporting on AI-driven job displacement, and to proof of a funded absorption capacity large enough for the displacement that has been measured. This is a readiness benchmark, not a policy instrument.

Operational Functionality & Specifications: Reporting on AI-driven job displacement.
Published monthly, audited yearly. Monthly, beside the measured displacement: absorption capacity funded for 12 months and modelled for 5 years, with the shortfall stated as a figure. Including Owners with no unemployment insurance (self-employed, freelancers, contractors, new entrants).
Retained 10 years. Reporting established within one month of the first request.
Free, no registration, bulk-downloadable. Corrections published as dated revision entries, never edits.
No extension required: the specification above is complete.

Strategic Justification: This right is a long-term warning benchmark for mass job loss through automation, especially where 10% or more of jobs could go with nothing in place to absorb them. The Industrial Revolution is the closest example, and the difference is speed. A machine had to be built, delivered and installed, one sector at a time, which gave society decades to adapt. AI spreads as software, across many sectors at once, office work included, far below the cost of human labour, and crosses borders without a visa. Combined with robots, any repeatable job is at risk.

AI used as a helper is a machine like any other: it multiplies what a worker can do. Autonomous AI replaces the worker. Part of its price advantage comes from rules that bind only people: no minimum wage applies to it, and none of the taxes and contributions on labour. Right 18 measures that gap. An hour of human work costs a business far more than the worker keeps; for an hour of AI work, the ratio is close to 1.0.

Replacing people with AI removes 3 things that are rarely counted.
Contributions. A salary pays income tax, social insurance, health care and, in many countries, today's pensions, with no savings behind them. The AI service that replaces it pays sales tax, and profit tax where it declares a profit, often in another country.
Responsibility. An employee who keeps making mistakes is fired, and can be sued or prosecuted. An AI that makes 1,000 mistakes is repaired, and the cost stays with whoever was harmed. A risk nobody pays for is carried by the Owners, as Right 25 describes.
Continuity. Employees are absent one at a time. An AI provider that goes down, becomes unreliable or goes bankrupt fails everywhere at once.

How to prepare — insurance, taxes, regulation, or nothing — is a management decision, and this right takes no position on it. It gives Owners early warning, makes a lack of preparation visible while there is still time to adapt, and shows the shortfall once job losses have begun.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Category 9: State Structure & Security

31. Law Enforcement Identification & Eligibility Safeguard [AUDIT EFFECT]

Standard Definition: Personnel authorized to use force domestically should be identifiable at the point of interaction, and the origin and eligibility of that force published. This is a disclosure benchmark, not a refusal right.

Operational Functionality & Specifications:

Identification: badge number, name, department available on request; face uncovered.
Recording: obstruction of lawful recording of Agents on public duty — seizure, deletion, threats, ordered stop — is non-compliance.
Eligibility baseline: a natural person with 18 years continuous citizenship and local residency, each counted from its own grant date; screening covers prior legal identities.
Autonomous Systems: non-human systems capable of applying force are outside the scope of authorized personnel; their deployment and use against Owners should be published as use of force, not as equipment.
Personnel Origin (published as shares of total): non-citizens; citizens naturalized less than 18 years ago; personnel from foreign agencies; contracted personnel. Published annually, retained 10 years. Free, no registration, bulk-downloadable. Corrections published as dated revision entries, never edits.
No extension required: the specification above is complete.

Strategic Justification: Owners should be able to identify Agents authorized to use force to prevent accountability-free misconduct. Residency ensures the Agent is a member of the community they serve. Forces recruited outside the citizenry have no local accountability and no exit cost; mass naturalization converts an imported force into a domestic one on paper, and only tenure counted from acquisition resists this. Safety note: Shadow Audit is the default (Doc 53, Section 4 'Safety and Risk Control' [REF:D53])

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH) & Local Government(CAT-LOCAL-GOV)
& Law Enforcement(CAT-SECURITY).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

32. Report Public Emergency Readiness [AUDIT EFFECT]

Standard Definition: The state should publish annual reports regarding its readiness for emergencies, including resource capacity and reaction times for natural disasters, industrial accidents, and infrastructure failures.

Operational Functionality & Specifications:

Nature: Wildfire, flood, earthquake, massive drought, heat wave, blizzard, hurricane, tornado, pandemic.
Industrial/Military: Accidents (chemical, biological, nuclear), fire, explosion, mining, transport, infrastructure (dam, bridge, tunnel), poisoning.
Shortages: Water, food, electricity, medical, shelter/homelessness.
Socio-Political: War, immigration, terrorist attacks.
Per hazard: the resource capacity held; the reaction time the Organization commits to, by service and by area; and the warning it can issue — what it can predict, the channel used, the lead time, and the share of the population that channel reaches.
Compliance: Yearly independent audit required.
Data reporting should be established within one year from the first request. Retained 10 years.
Free, no registration, bulk-downloadable. Corrections published as dated revision entries, never edits.
No extension required: the specification above is complete.

Strategic Justification: Readiness cannot be checked at the moment it is needed, and that is the only moment it matters. A published figure can be checked before — against the previous year, against another area, and against the hazards the Organization itself lists. Publication creates no capacity. It makes the distance between the plan and the hazard visible while there is still time to close it. A hazard listed with no reaction time and no warning channel has been named, not prepared for.
This Right takes no position on what capacity is adequate, or on how it should be funded.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH)& Local Government(CAT-LOCAL-GOV)

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

33. No Detention Without Dangerous Conduct [AUDIT EFFECT]

Standard Definition: An Owner should not be imprisoned or detained if their conduct did not involve criminal force and poses no danger to others. For example, the inability to pay a fine is a financial failure, not a criminal act. The request is not binding to the organization.

Operational Functionality & Specifications: Detention is compliant with this Right only where the Owner, by their own act, deliberately or recklessly harmed, or tried to harm, another person's life, body, freedom or property, by force, threat, taking or deception, or presents a present danger of doing so.

Never a ground, and recorded as non-compliance: inability or unwillingness to pay a fine, debt or fee; homelessness; insolvency; identity or status; non-violent speech or assembly; administrative or regulatory breaches. None of these is a ground in itself; force, taking or deception committed alongside them is tested under the first paragraph.

No extension required: this Right is tested by the act itself — what took place, and whether it did.

Strategic Justification: Protects liberty from status-based jailing. If a company goes bankrupt without imprisonment, a single Owner has the same right.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV) & Regional Authority(CAT-REG-AUTH)& Local Government(CAT-LOCAL-GOV)
& Law Enforcement(CAT-SECURITY)

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

34. Safeguard Against Unjustified Surveillance [AUDIT EFFECT]

Standard Definition: Data collection and storage for Owners who are not suspected of a crime is restricted. Owners may object to mass surveillance and request transparency regarding what data has been captured and stored.

Operational Functionality & Specifications: Audit benchmarks: data on non-suspects should be deleted within 90 days. Profiling of non-suspects and foreign participation in surveillance are recorded as non-compliant. On request, Owners should be informed what data was captured about them, since when, and by whom. Surveillance authority should be delegated only to citizens with ≥10 years citizenship tenure, documented residency continuity, and full legal accountability, and surveillance operations and oversight should be conducted within the country's jurisdiction (no foreign outsourcing or offshore processing). This is a non-binding request channel, not an enforceable policy.

No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: No Agent may spy on the Principal (the Owner) without documented suspicion. The citizenship-tenure threshold keeps surveillance within the country and prevents outsourcing from being disguised through ad hoc naturalization.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE) & Law Enforcement(CAT-SECURITY) & Monopolies(CAT-MONOPOLY)
& Non-Business Entities(CAT-NON-BUS) & Business Entities(CAT-BUSINESS).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

35. The Right to Surveillance Warnings [AUDIT EFFECT]

Standard Definition: The Organization should require that electronic products and software services carry a clear, visible warning wherever they perform or enable surveillance or manipulation, delivered at the point of purchase or activation — package, invoice, checkout screen, confirmation email, or first-run setup — rather than only within long legal terms or documentation. The warning discloses behaviour and Owner control options; it does not restrict what a product may do.

Operational Functionality & Specifications: See technical specs in Doc 32 [REF:D32-R35-EXT].

Strategic Justification: An Owner cannot consent to a hazard they cannot see. Consumer protection already treats this as settled for chemical, electrical and fire risks, where disclosure appears at the point of purchase rather than inside documentation; surveillance and remote control carry comparable real-world harm — stalking, coercion, financial loss, long-term profiling — and warrant the same treatment. Visible disclosure also makes products comparable at the moment of purchase, which is the only point at which an Owner has leverage.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

36. Safeguard Against Emergency Overreach [STOP CONDITION]

Standard Definition: History shows that crisis regimes ("rule by decree") are sometimes misused to expand power, prolong emergencies, or cover up poor governance or manipulation; therefore, this right functions as a **risk-minimization safeguard**, not a punishment. Owners may demand dismissal of leaders who rule by decree beyond defined limits and require an immunity-free accountability window before returning to protected office.

Operational Functionality & Specifications: Decree limits: 730 days (President / Head of Government / Head of Parliament), 1,095 days (cabinet members), 1,460 days (other immunity-protected roles). Post-limit requires a 4-year continuous immunity-free period for accountability; if a person held multiple protected roles, time counts toward the applicable limit for each role (or apply the strictest limit).

No extension required: this Right is tested by the act itself, and the specification above is complete.

Strategic Justification: Emergency decrees have historically been used to expand Agent power or prolong crises, including after mismanagement, manipulation, or deliberate setup—and the true cause is sometimes only clear decades later. Therefore, this right is a risk-control safeguard—not punishment—because prevention and incentive alignment are often the only practical way to reduce avoidable emergencies and accelerate crisis resolution.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Decree rule exceeding the limits in this Right. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, A2, A3, B2, E in serious cases, potentially C1, C2, C3, D1, D2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

37. Right to Name the State Form [STOP CONDITION]

Standard Definition: Owners have the right to assess and categorize the state's form (e.g., Democracy, Dictatorship, Fascist) based on objective indicators without facing retaliation. It is the Owner who evaluates the organization, not the reverse.

Operational Functionality & Specifications: Owners assess performance; Agents retaliating against the assessment are subject to removal. Partisan opinions can lead to extreme categorization. Document 41 §7 helps against an undeserved label; the choice stays free.

No extension required: the specification above is complete.

Strategic Justification: In a principal-agent relationship, the Principal assesses the Agent, not the reverse.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Retaliation, threats, or investigations against an Owner for their assessment. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Generally A1, B2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

38. Voter Approval for Border Changes [AUDIT EFFECT]

Standard Definition: Owners may audit whether any annexation or separation of territory was authorized in advance by public vote, with the mandate secured at least 1 year before the change takes effect. A change made without such a mandate, or sooner, is recorded as non-compliant, and a vote held afterwards does not cure the finding. This is an authorization benchmark; it does not stop or reverse any change.

Operational Functionality & Specifications: See technical specs in Doc 32 [REF:D32-R38-EXT].

Strategic Justification: Border changes are fundamental changes to the Owner-Organization contract and have historically carried catastrophic risks for Owners (e.g., the annexations of 1938). They therefore call for explicit, high-threshold authorization from the Owners.

Accountable Entity (Relationship): National Government(CAT-NAT-GOV).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.

Safety note: Shadow Audit is the default [REF:D53, Section 4].

39. Compensation Benchmark Transparency Safeguard [AUDIT EFFECT]

Standard Definition: Owners may request disclosure of the compensation paid to employees and office-holders in high-stakes positions, and of the benchmark used to set it. Compensation should be set against a published, population-scaled benchmark rather than by internal discretion, so that pay is neither structurally uncompetitive nor politically improvised. Disclosure does not oblige the Organization to adjust any salary.

Operational Functionality & Specifications: See technical specs in Doc 32 [REF:D32-R39-EXT].

Strategic Justification: An Owner cannot assess whether pay levels expose the Organization to capture if neither the amounts nor the basis for them is visible. Structural underpayment in positions controlling large budgets raises the return on influencing the holder, and discretionary pay-setting is itself an integrity risk. A published benchmark makes both observable without requiring the Owner to take a position on what any figure should be. Pay is one factor among several; disclosure does not by itself reduce corruption.

Accountable Entity (Relationship): All State-Related Organizations(CAT-ALL-STATE).

Reasons for a request (any): Non-compliance with this Right [REF:D40 §4]. Request Not Handled [REF:D40 §18].

Remediation Protocols [REF:D40 §15]: A2. Request Not Handled: B2, C1.

Who may send a request [REF:D40 §5]: Individual Owners.
