The Citizens' (Owners') Rights Framework

TCORF

Activating the "Citizen-Owner" Role

The Citizens' (Owners') Rights Framework (TCORF) is a non-violent, non-ideological audit tool for checking how an organization you co-own actually performs. One person can run it alone. TCORF takes 39 governance pain points and converts each one into something with an answer. Most become a defined act or process, some become a checklist, a dataset with stated fields and deadlines, or a published figure. Either way it replaces contested words like "adequate" and "reasonable" with tests that can fail.

One, the SSR, you can calculate yourself today. The SSR (Service Self-Purchase Ratio) adds up everything deducted from your pay — taxes and social contributions, yours and your employer's — and turns it into a single number: the hours you work to buy one hour of your own work as a service. The prompt calculates the TCORF SSR for any country or state you name. Steps:

0. **Operational Note:** You must review "**53 TCORF Disclaimer.pdf"** [REF:D53] regarding liability and operational risks before deployment.
1. **Download the 15 PDFs** from the website and **load them into your AI tool** (two batches if your tool limits uploads).
2. **Paste the prompt** from the file "**prompt_#00_R18_SSR.txt"** into your AI (based on D32-R18-EXT).

   Web search must be on in your AI tool.

   Run it (or ask AI to run prompt #00 from the uploaded files).

   Read the output.
3. **The prompt then asks you for a gross annual salary with its currency, and one country or state.**

   Example: Netherlands, 40,000 Euros
4. The answer takes 1–10 minutes depending on your model. It searches for the current rates before calculating.

Where to start TCORF:

- Orientation: "00 TCORF List of Documents" — all 15 documents, reading order
- Fastest — up to 5 minutes, 1 AI evaluation (prompt): "12 TCORF Quick Start Guide" Section 1 and Section 4
- Recommended — up to 30 minutes: "12 TCORF Quick Start Guide"

  or additional AI prompts in Section 4: 4 evaluations or "Public figures"/"Organization Trees" (each 2)
- Full orientation — up to 4 hours: "12 TCORF Quick Start Guide"

Version integrity. Each release is published with a file digest list at www.tcorf.com. A copy whose digest does not match the published list for its version is not the framework, whatever it is called. The list at the official source is authoritative. A digest list distributed inside a document set would authenticate nothing, since a modified set can carry a modified list — which is why it is published only on the site.

Verify on any system: sha256sum <file> (Linux, macOS) or Get-FileHash <file> -Algorithm SHA256 (Windows).
